GP's reach grows slowly and stays below enumeration
GP, seven operators, sizes 9–17
GP, EML, LDE (c=0), PLM, sizes 11–17
exhaustive enumeration (median; band: range over operators)
enumeration: about +0.9 nodes per doubling
GP: +0.30 nodes per doubling
(one node ≈ 10× the budget)
reach K_{50} (nodes of shortest construction)
